

AMENDMENTS TO THE CLAIMS:

Please amend Claims 48 and 50 through 52, and add Claims 53 through 56 as follows:

1 - 47. (Cancelled)

48. (Currently Amended) A receiving apparatus connectable to an internet, said apparatus comprising:

a receiving unit for receiving a moving image-streaming content by an access through the internet to a URL of the streaming content;

a memory unit for storing URL information ~~linked to~~ of the moving image-streaming content received by the receiving unit;

~~a decoder for decode processing the streaming content so as to be displayed on a display screen;~~

~~a power source for supplying a power at least to the decoder;~~

~~a display unit for displaying on a display screen the moving image-streaming content received by the receiving unit;~~

~~an operation unit for receiving an operation of turning off and turning on the power source;~~

~~a storage for storing the moving image-streaming content received by the receiving unit; and~~

~~a control unit for (1) controlling, responsive to the receiving by the operation unit of the operation of turning off, the power source, to stop the displaying of the moving~~

~~image-streaming content on the display screen; (a) to read out the URL information stored in the memory unit, and (b) to periodically repeat accessing of a URL linked to of the moving image-streaming content, of which displaying is stopped; which had been displayed before the turning off, so as to receive by the receiving unit and store in the storage the latest the moving image-streaming content, by the receiving unit and to store the moving image-streaming content in the storage; and (2) controlling, responsive to the receiving by the operation unit of the operation of turning on, the power source; to read out from the storage the latest stored moving image-streaming content from the storage and to start the displaying on the display screen of the latest stored moving image-streaming content on the display screen.~~

49. (Cancelled)

50. (Currently Amended) A receiving apparatus comprising:

a first receiving unit for receiving a moving image-streaming content by an access through an internet to a URL of the moving image-streaming content;

a memory unit for storing URL information ~~linked to of~~ the moving image-streaming content received by the first receiving unit;

a second receiving unit for receiving a television broadcast program transmitted through a broadcast signal;

an operation unit for receiving an operation of switching from a displaying of the moving image-streaming content on a display screen to a displaying of the television broadcast program on the display screen, and an operation of switching from the displaying of the television broadcast program on the display screen to the displaying of the moving

image-streaming content on the display screen;

a storage for storing the moving image-streaming content received by the first receiving unit; and

a control unit for (1) controlling, responsive to the receiving by the operation unit of the operation of switching from the displaying of the moving image-streaming content on the display screen to the displaying of the television broadcast program on the display screen, (a) to stop the displaying of the moving image-streaming content on the display screen and to start the displaying of the television broadcast program on the display screen. (b) to read out the URL information stored in the memory unit, and (c) to periodically repeat accessing of a URL linked to of the moving image-streaming content which had been displayed before starting the displaying of the television broadcast program on the display screen, of which displaying is stopped; so as to receive by the receiving unit and store in the storage the latest moving image-streaming content, ~~by the receiving unit and to store the moving image-streaming content in the storage;~~ and (2) controlling, responsive to the receiving by the operation unit of the operation of switching from the displaying of the television broadcast program on the display screen to the displaying of the moving image-streaming content on the display screen, to read out from the storage the latest stored moving image-streaming content ~~from the storage~~ and to start the displaying on the display screen of the latest stored moving image-streaming content ~~on the display screen.~~

51. (Currently Amended) The receiving apparatus according to claim 48, wherein the control unit is further configured to, responsive to the receiving by the operation unit of the operation of tuning turning on, the power source, (a) read out the URL information stored in the

memory unit and to (b) receive by the receiving unit the latest moving image-streaming content ~~by the receiving unit~~ by accessing the URL ~~linked to~~ of the moving image-streaming content which had been displayed before the turning off.

52. (Currently Amended) The receiving apparatus according to claim 50, wherein the control unit is further configured to, responsive to the receiving by the operation unit of the operation of switching from the displaying of the television broadcast program on the display screen to the displaying of the moving image-streaming content on the display screen, (a) read out the URL information stored in the memory unit and to (b) receive by the receiving unit the latest moving image-streaming content ~~by the receiving unit~~ by accessing the URL ~~linked to~~ of the moving image-streaming content which had been displayed before stopping of the displaying on the display screen.

53. (New) A method for receiving streaming contents through a network, the method comprising:

receiving a moving image-streaming content by an access through the internet to a URL of the streaming content;

storing URL information of the moving image-streaming content;

displaying the moving image-streaming content on a display screen;

receiving an operation of turning off and turning on;

storing the moving image-streaming content;

responsive to the receiving of the operation of turning off, (a) reading out the URL information, and (b) periodically repeating accessing of a URL of the moving image-streaming

content which had been displayed before the turning off, so as to receive and store the latest moving image-streaming content; and

responsive to the receiving of the operation of turning on, reading out the latest stored moving image-streaming content and starting the displaying on the display screen of the latest stored moving image-streaming content.

54. (New) The method according to claim 53, further comprising:

responsive to the receiving of the operation of turning on, reading out the URL information and receiving the latest moving image-streaming content by accessing the URL of the moving image-streaming content which had been displayed before the turning off.

55. (New) A method for receiving streaming contents through a network, the method comprising:

receiving a moving image-streaming content by an access through an internet to a URL of the moving image-streaming content;

storing URL information of the received moving image-streaming content;

receiving a television broadcast program transmitted through a broadcast signal;

receiving an operation of switching from a displaying of the moving image-streaming content on a display screen to a displaying of the television broadcast program on the display screen, and an operation of switching from the displaying of the television broadcast program on the display screen to the displaying of the moving image-streaming content on the display screen;

storing the moving image-streaming content;

responsive to the receiving of the operation of switching from the displaying of the

moving image-streaming content on the display screen to the displaying of the television broadcast program on the display screen, (a) stopping the displaying of the moving image-streaming content on the display screen and starting the displaying of the television broadcast program on the display screen, (b) reading out the URL information, and (c) periodically repeating accessing of a URL of the moving image-streaming content which had been displayed before starting the displaying of the television broadcast program on the display screen, so as to receive and store the latest moving image-streaming content; and

responsive to the receiving of the operation of switching from the displaying of the television broadcast program on the display screen to the displaying of the moving image-streaming content on the display screen again, reading out the latest stored moving image-streaming content from a storage and starting the displaying on the display screen of the latest stored moving image-streaming content.

56. (New) The method according to claim 55, further comprising:

responsive to the receiving of the operation of switching from the displaying of the television broadcast program on the display screen to the displaying of the moving image-streaming content on the display screen, reading out the URL information and receiving the latest moving image-streaming content by accessing the URL of the moving image-streaming content which had been displayed before stopping of the displaying on the display screen.
